

Temporary storage of sinker tube

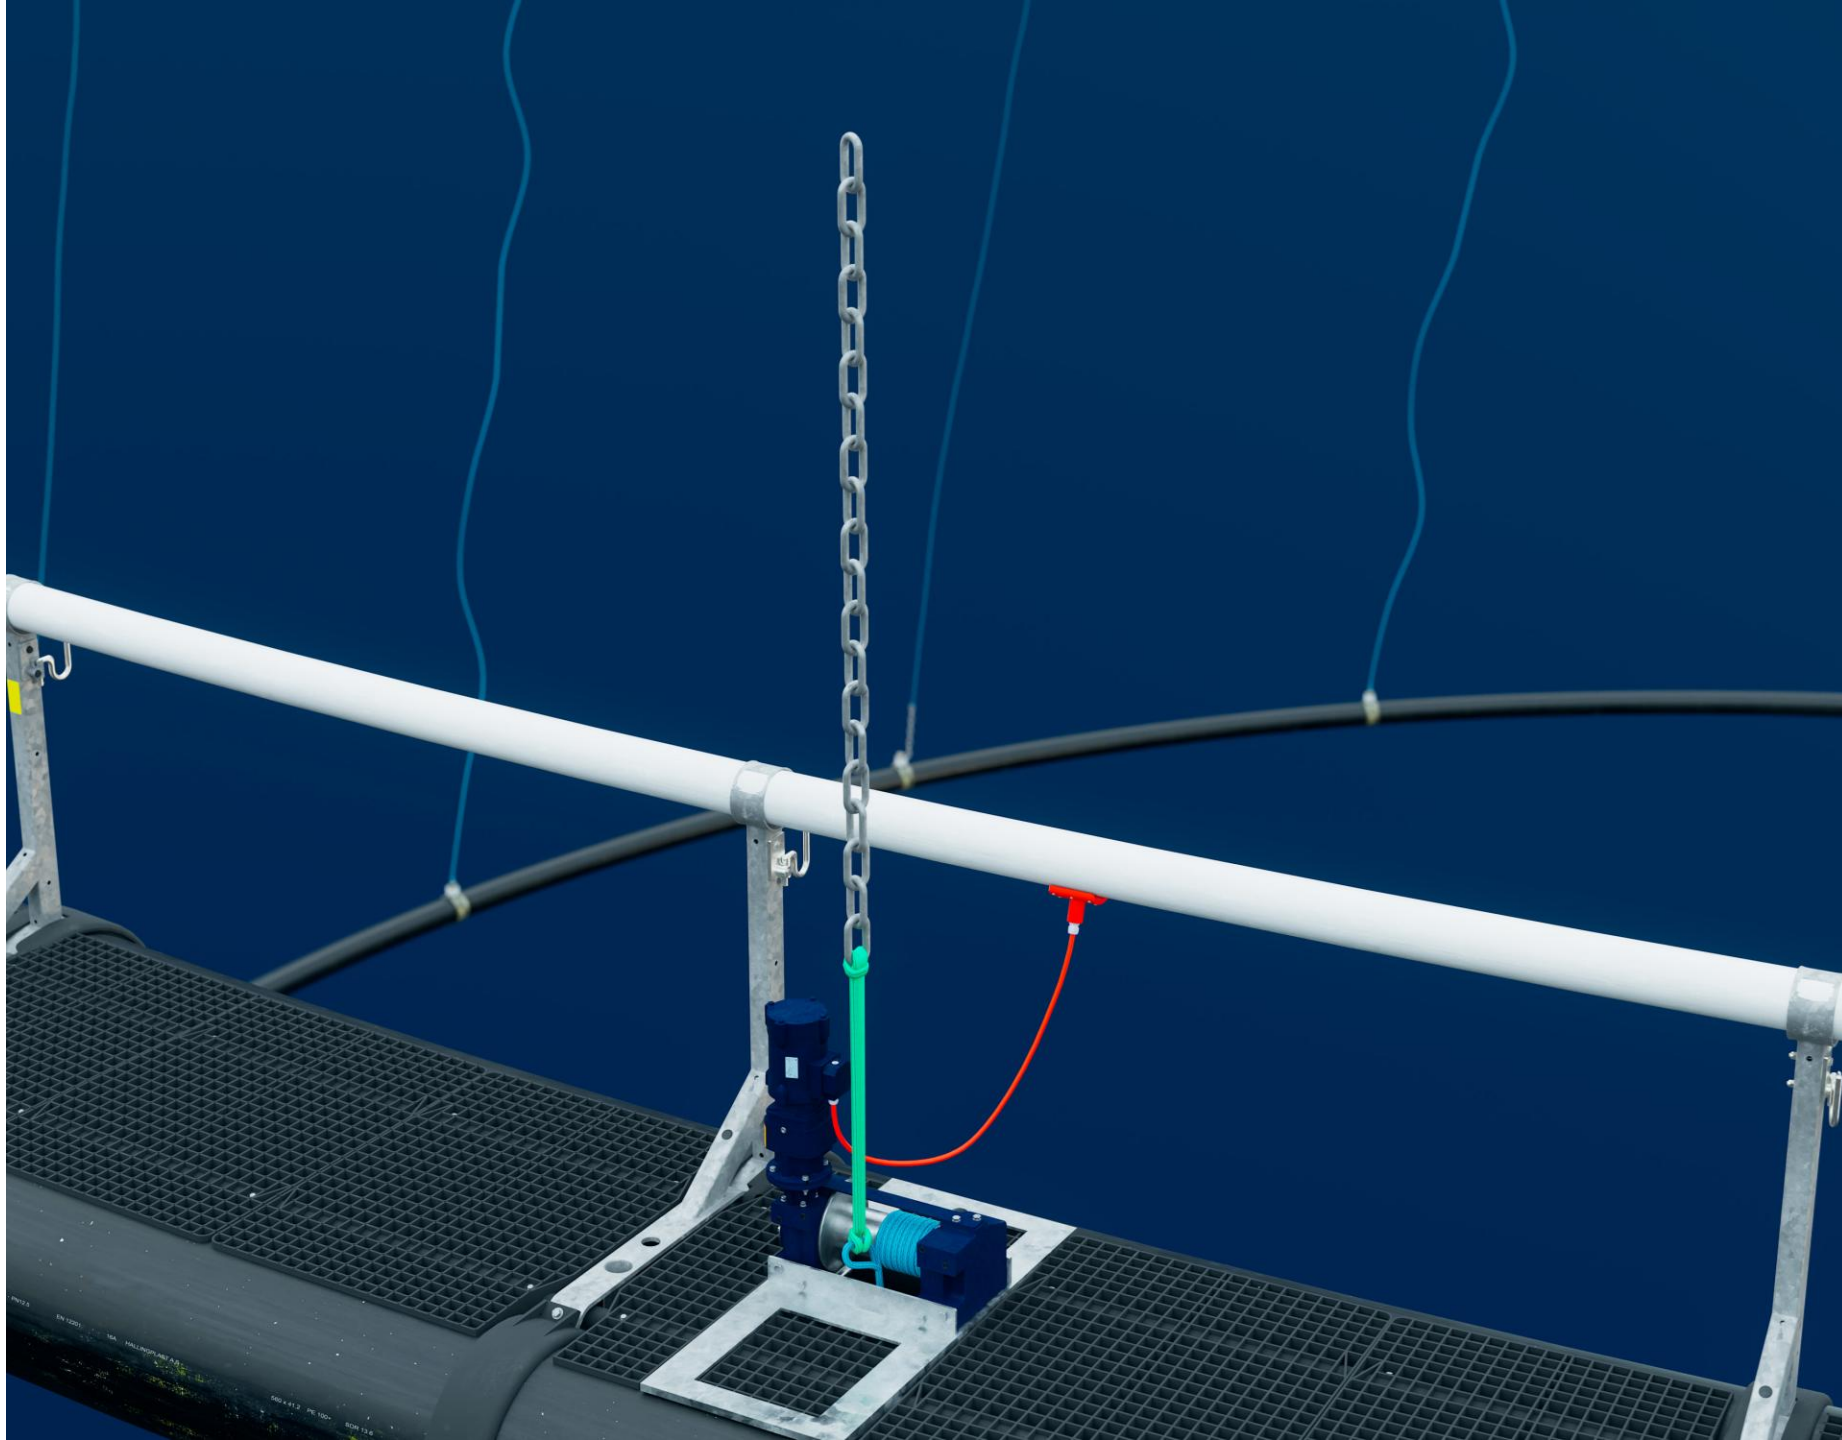

Lowered with Midgard® winch

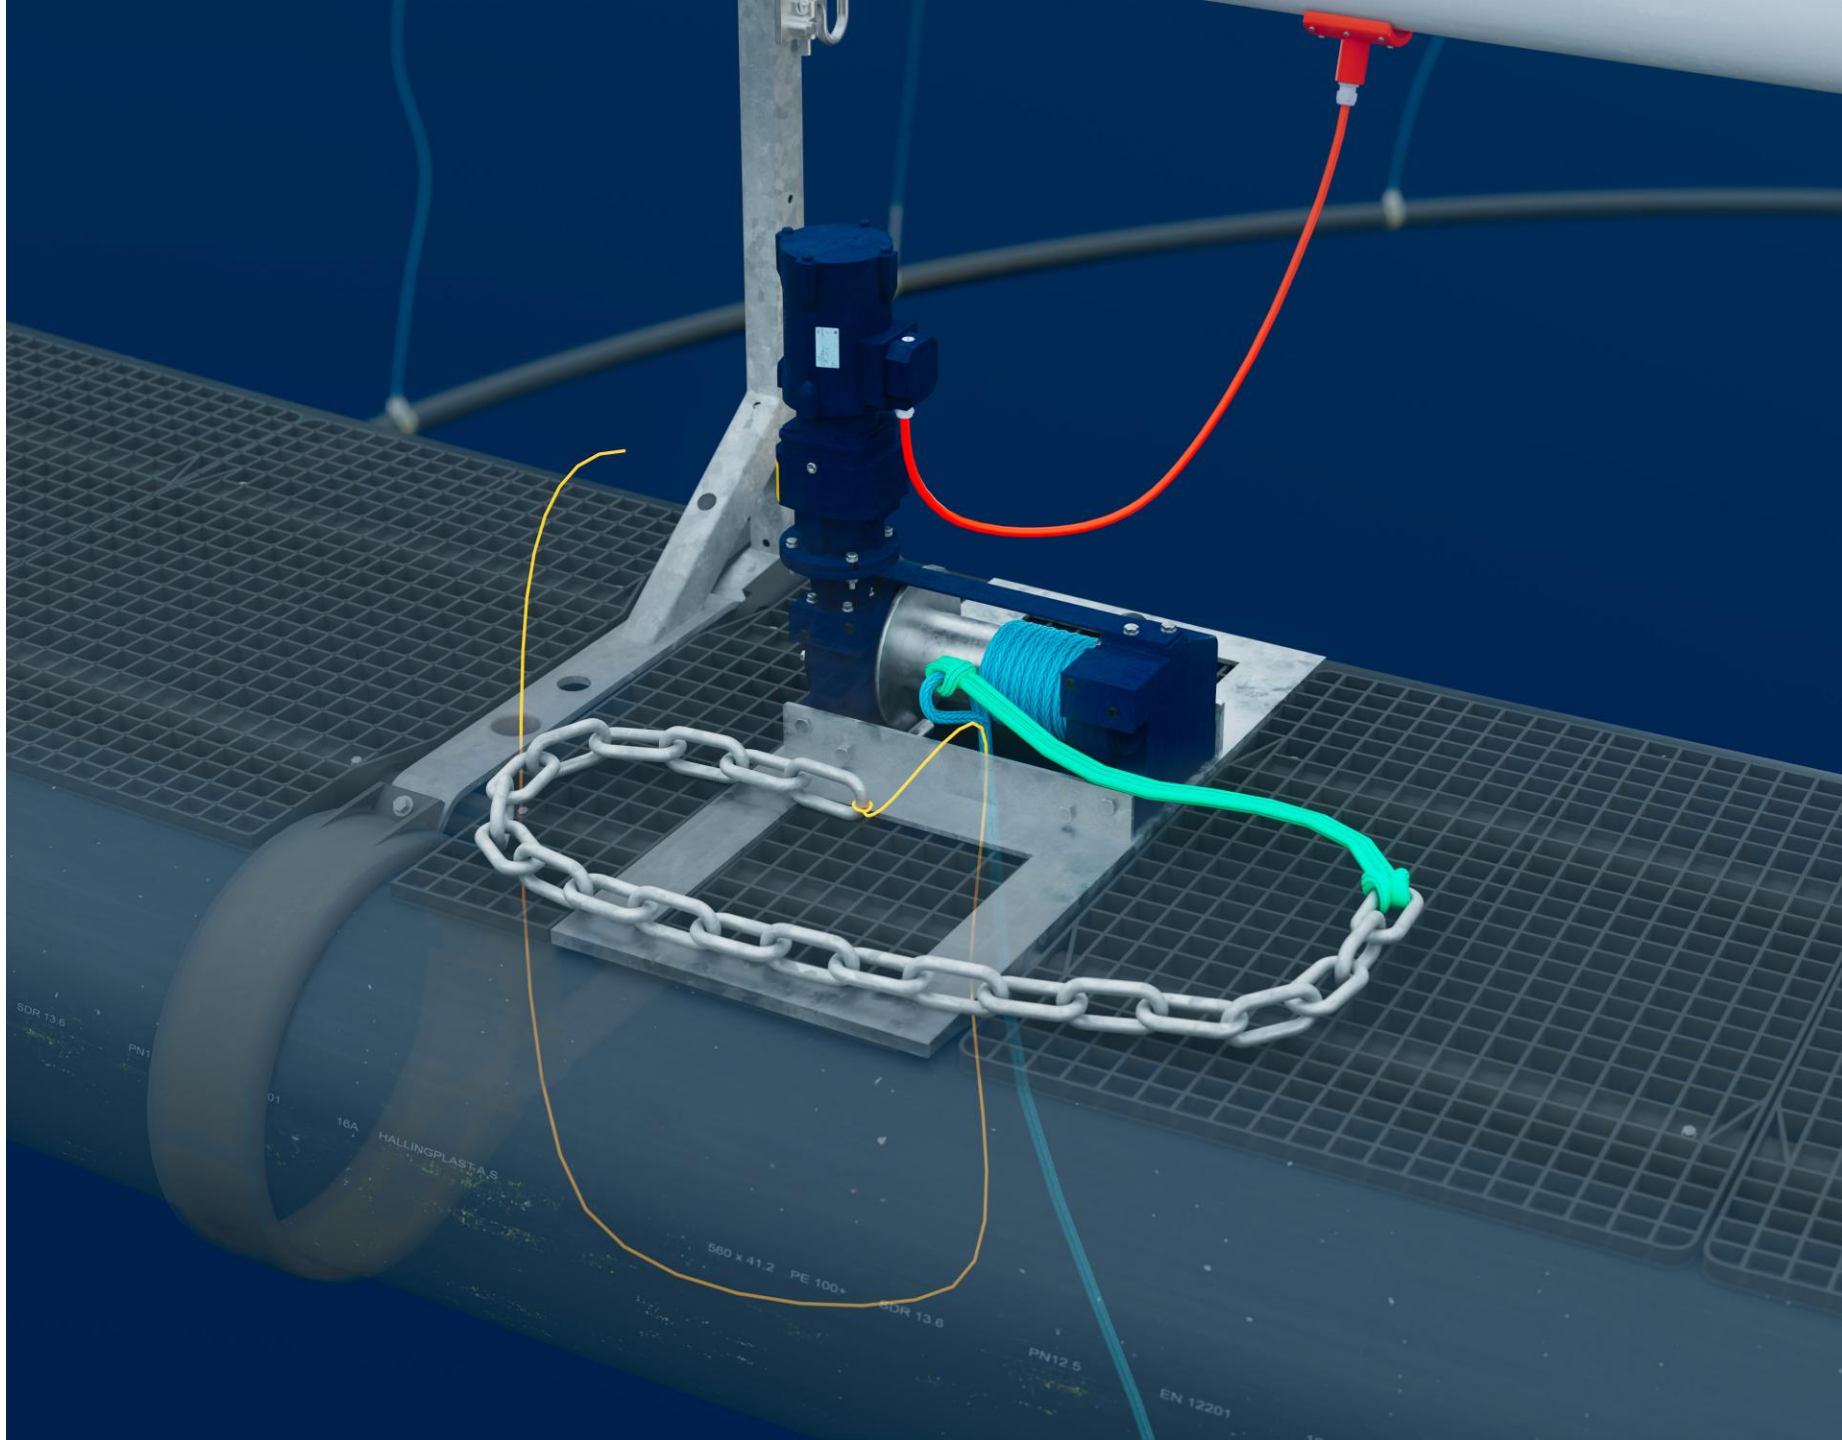

Lower the sinker tube with all winches until the storage loop on the aquaneema rope is accessible for choking. The loop is installed 6 meters from the end of the aquaneema rope.

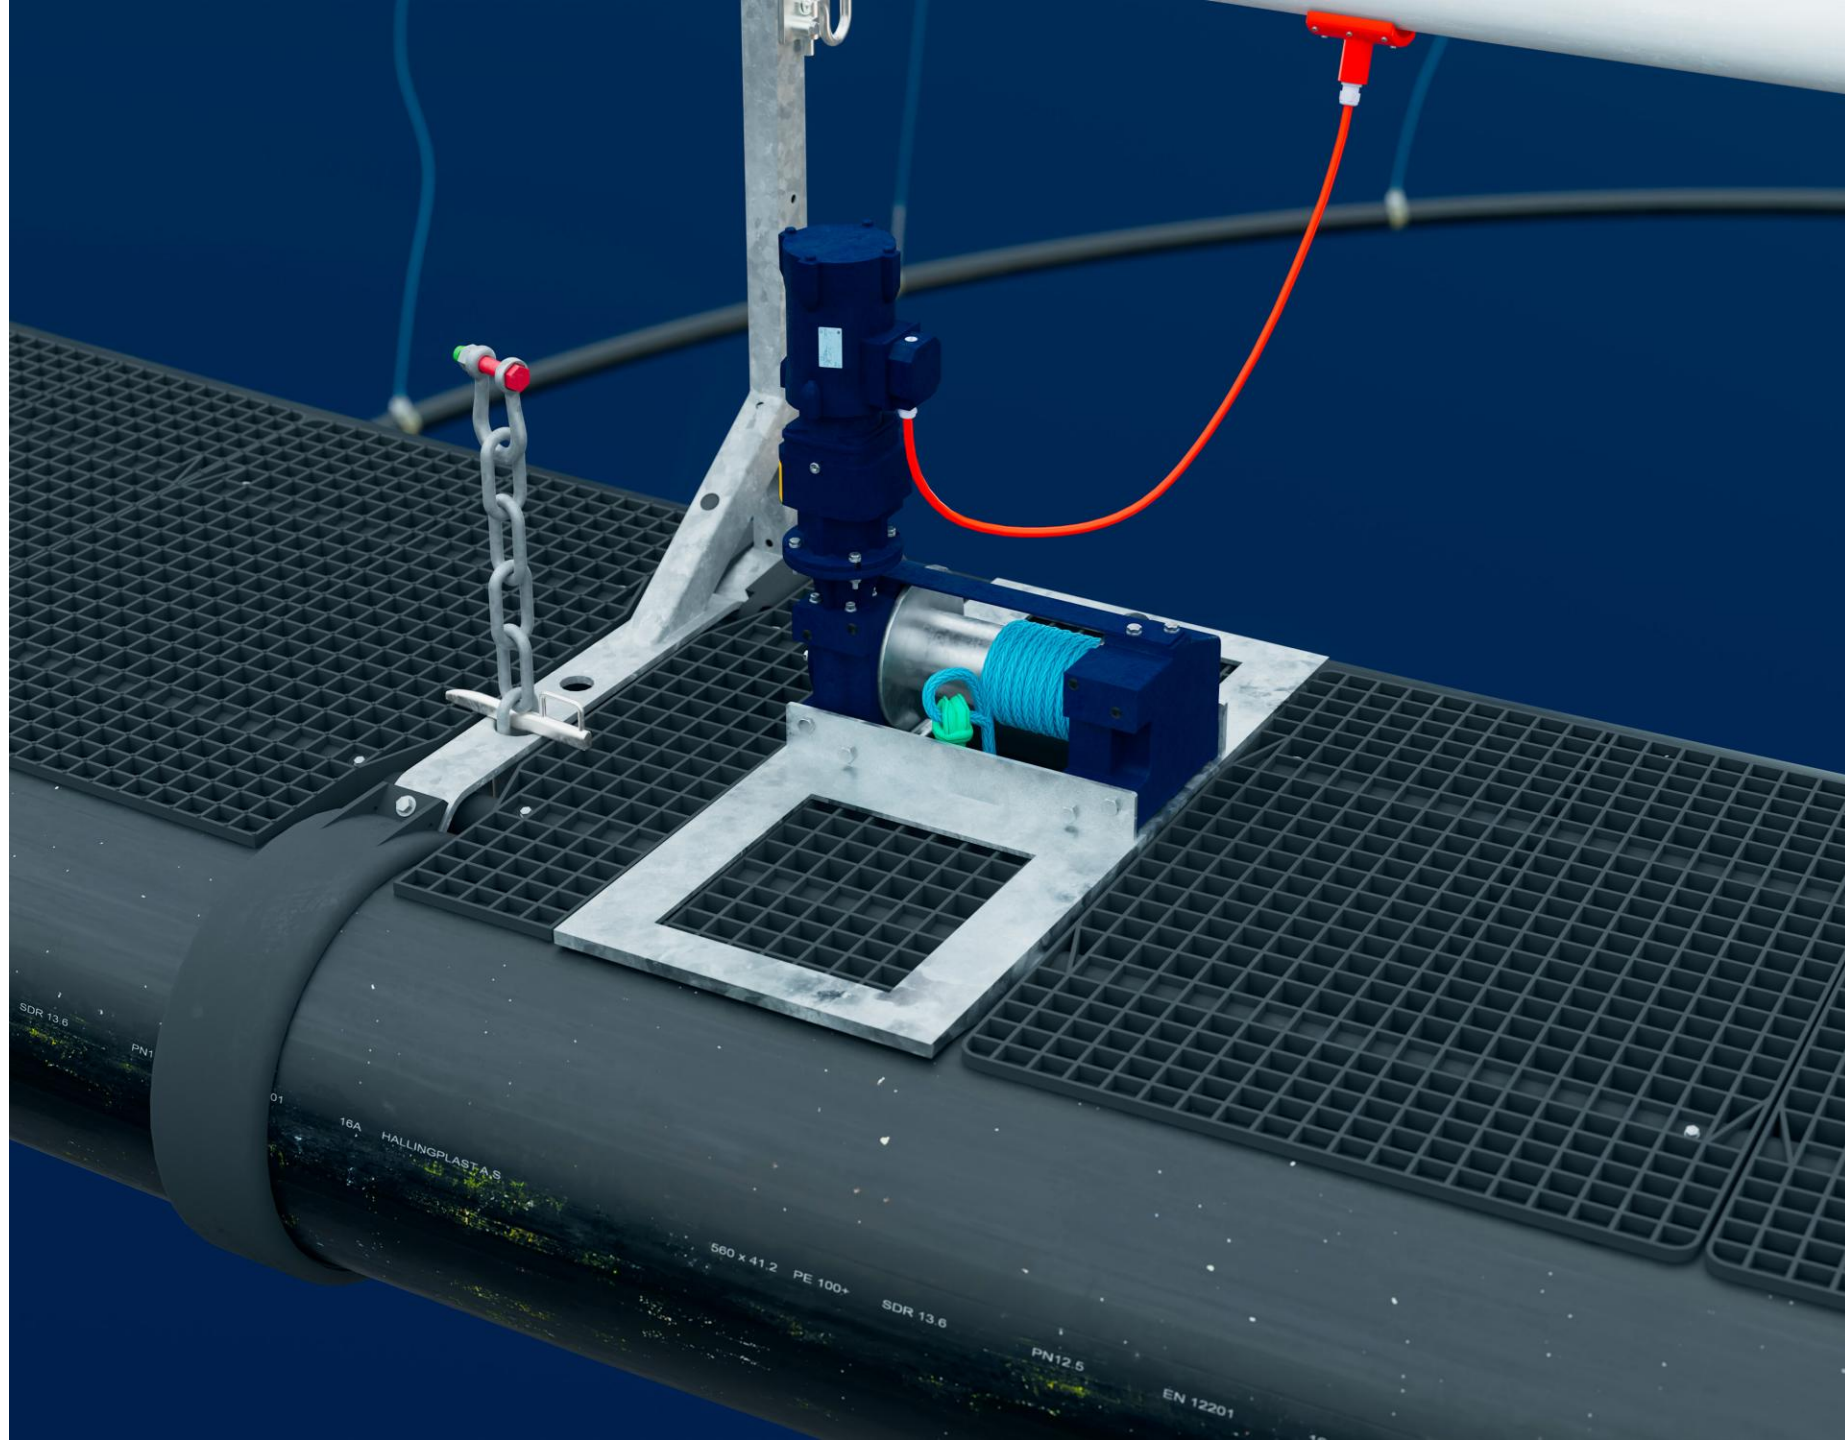

Choke the round sling
in the loop on the
aquaneema rope.
Length of round sling
must be adapted to the
length of the
customer's manual
suspension.

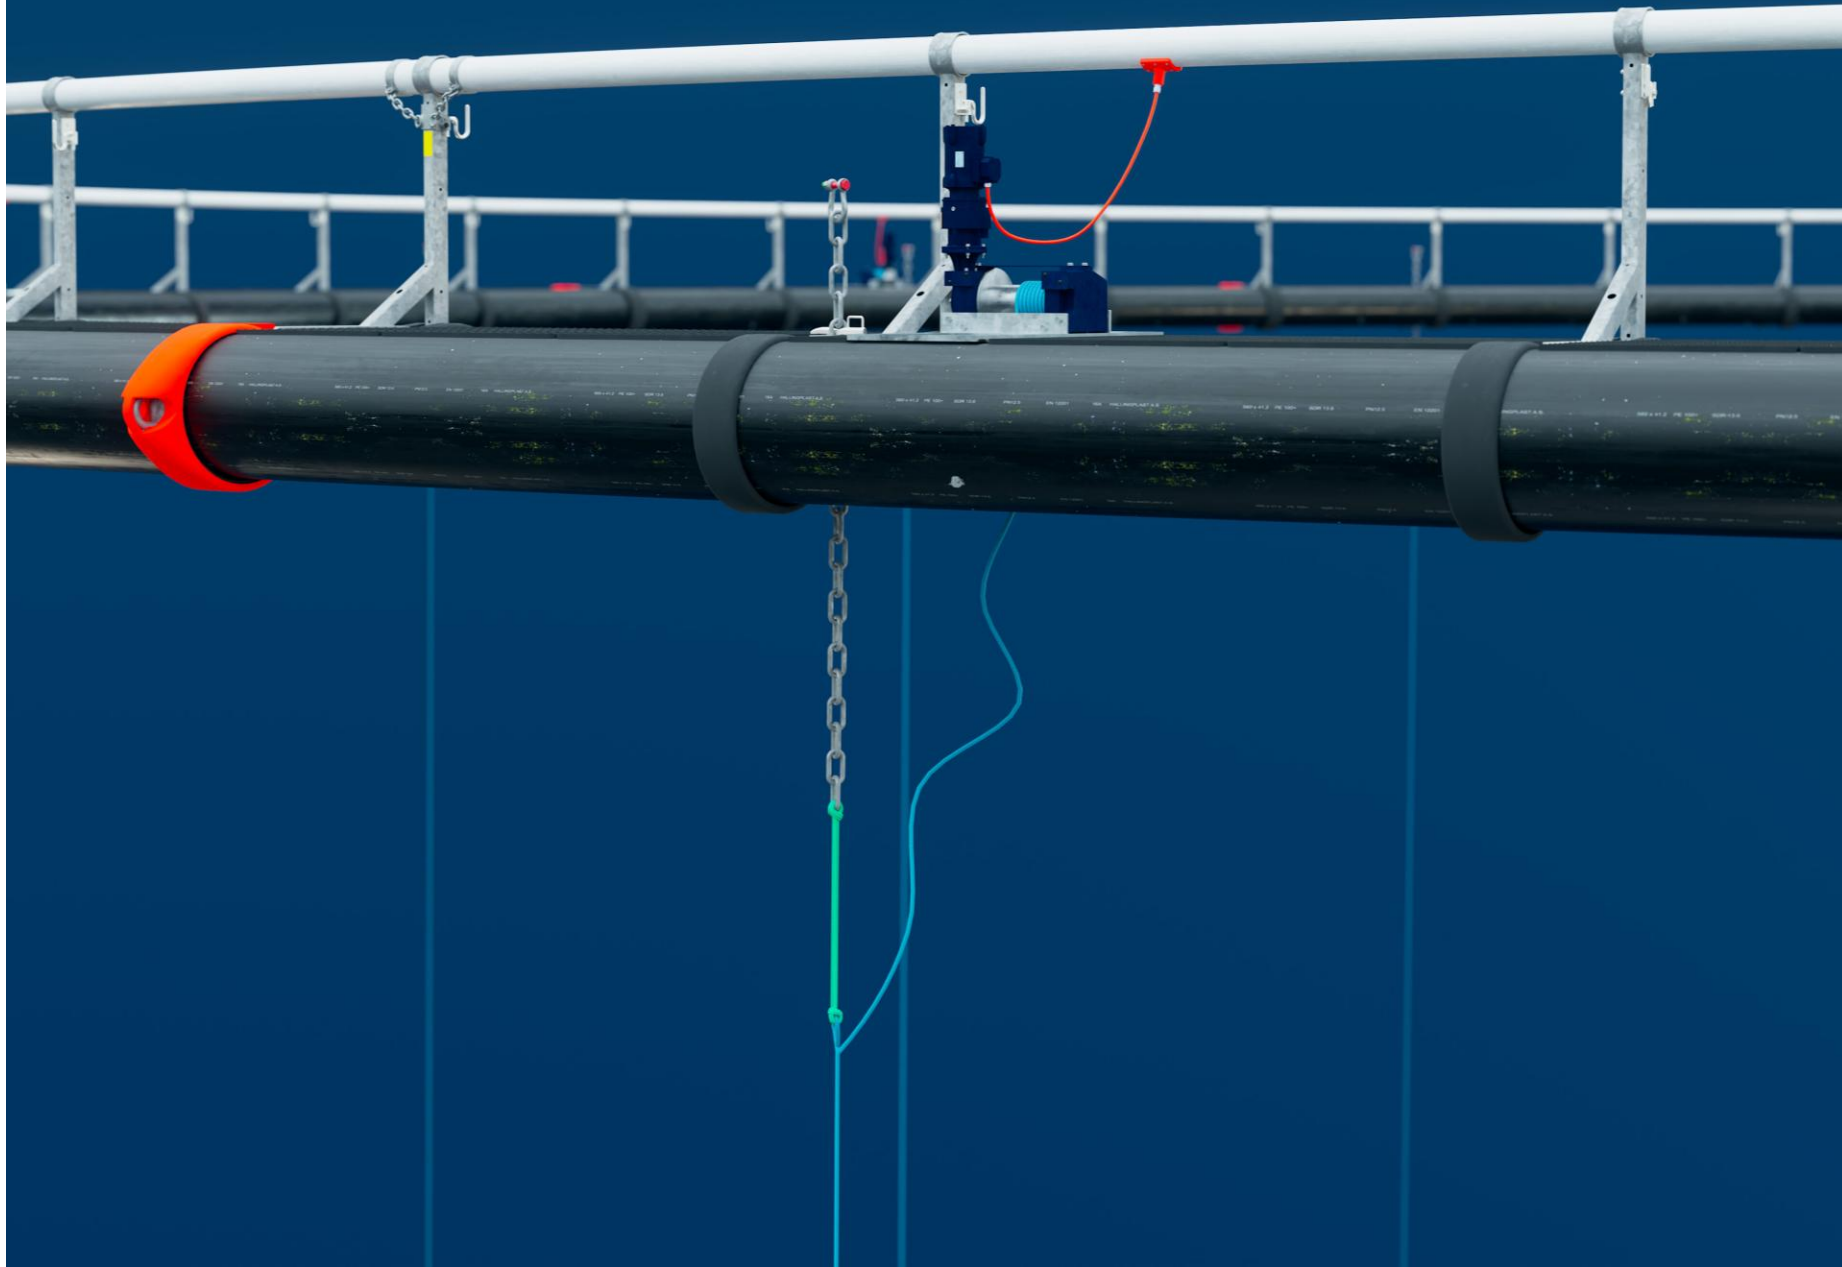

Choke the Midgard®
chain in the round
sling. Make sure the
strap length is equal
on both sides.

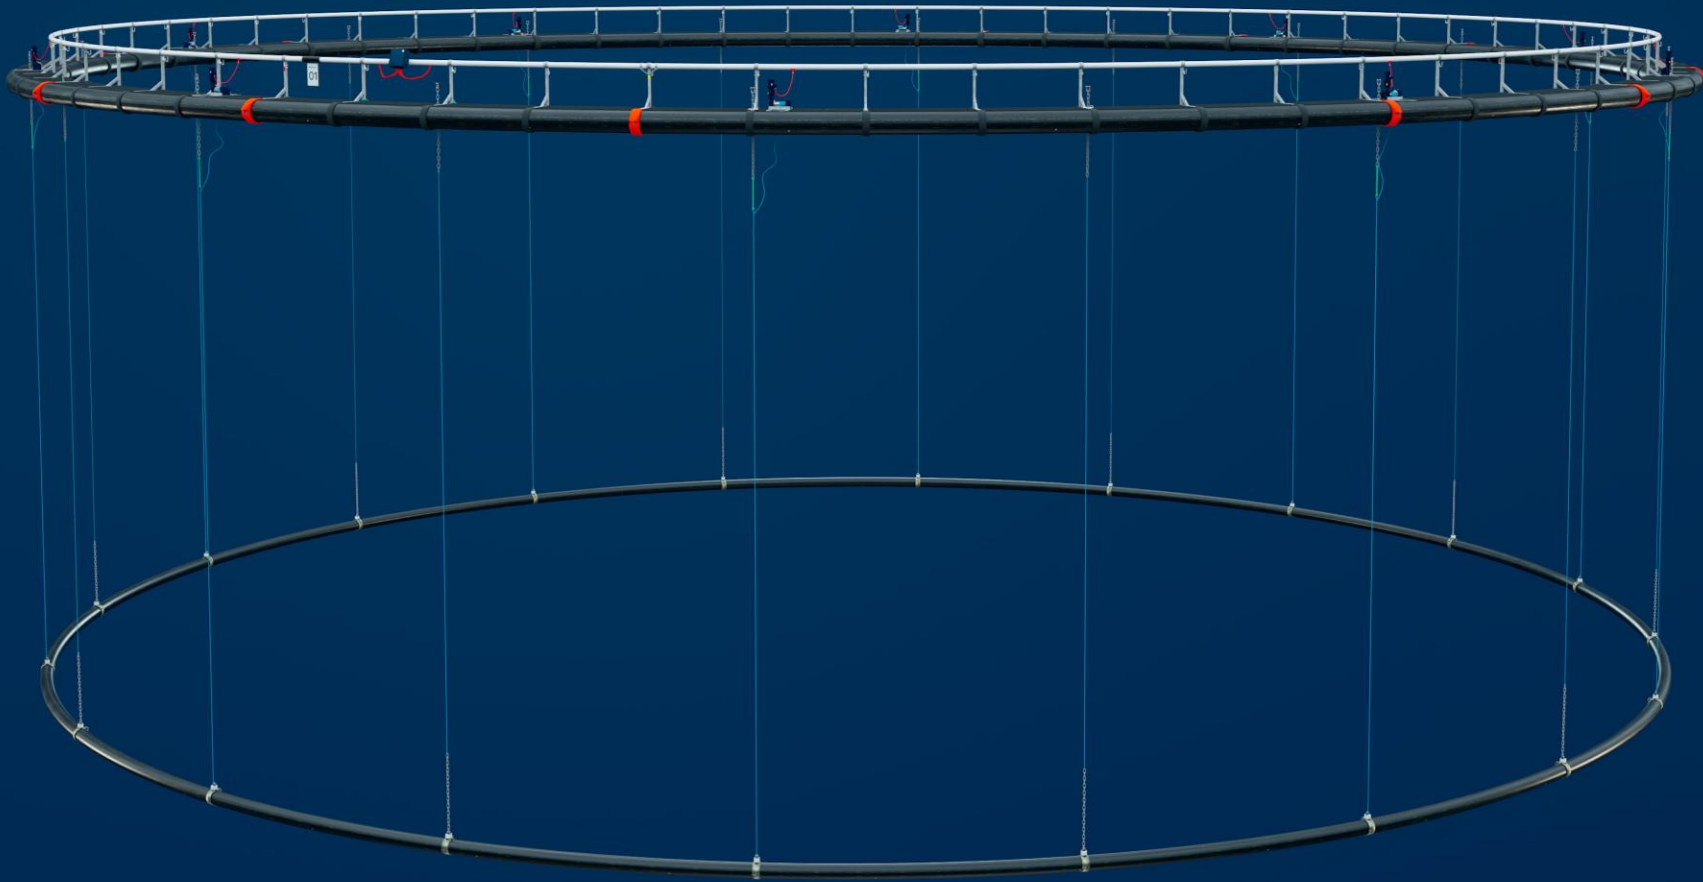

Install a rope in the chain tube on the bracket for pulling the chain through the chain tube. Control that the pen has a chain tube to the left of the winch.

Install service pin
type 1 in the chain
before further
lowering of the
sinker tube with
the winch.

The load is transferred to the chain. Ensure 70 cm slack on the winch.

Make sure the
sinker tube is
aligned at the
same depth on all
20 winch
attachment points.
